

INTEGRATED POLICY ANALYSIS AND MODELLING OF NATIONAL TRANSFORMATIONS TO ACHIEVE THE SDGS

Dr Cameron Allen

Research Fellow, Monash Sustainable Development Institute

Adjunct Research Fellow, UNSW Sydney

NOVEMBER 2021

Cameron.Allen@monash.edu

Characteristics of the SDGs:

- Complex – 169 targets
- Comprehensive – whole-of-system
- Integrated – economy, society, environment
- Long-term - future perspective; foresight
- Results-based – indicators, 2030 targets
- Transformative – not BAU

Complex Problems = Systems Approaches

Traditional thinking

Systems thinking

“For every complex problem there is an answer that is clear, simple and wrong”

SYSTEMS THINKING APPROACHES FOR SDG INTEGRATION

FWKS/SYSTEMS MAPS/CLDS

+3	Indivisible
+2	Reinforcing
+1	Enabling
0	Consistent
-1	Constraining
-2	Counteracting
-3	Cancelling

CROSS-MATRIX ANALYSIS

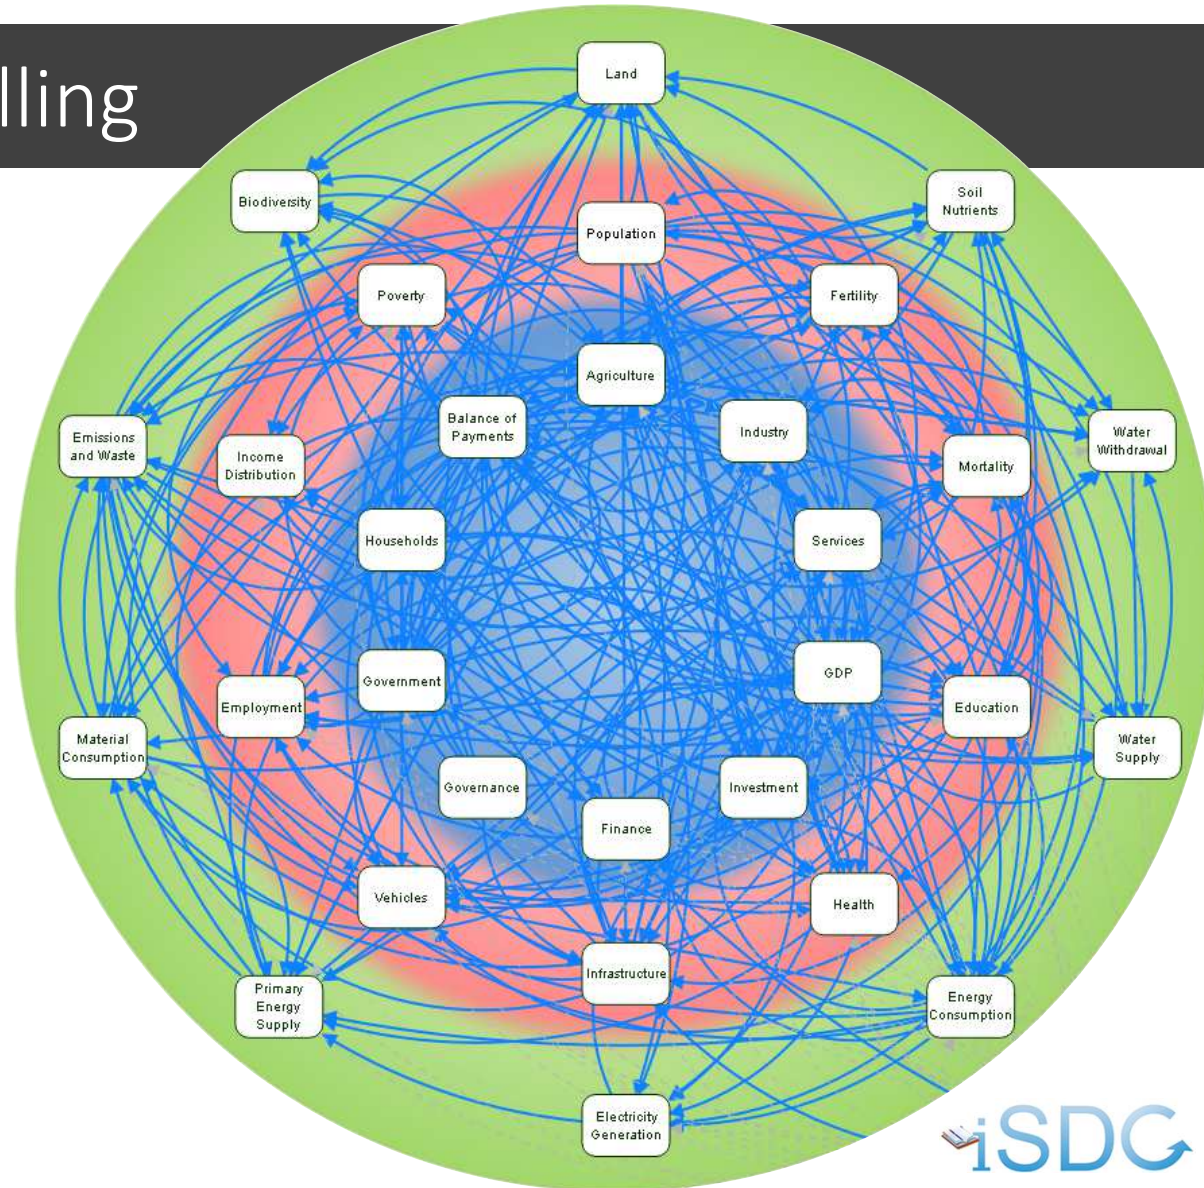

NETWORK ANALYSIS / STATISTICAL APPROACHES

DYNAMIC MODELLING

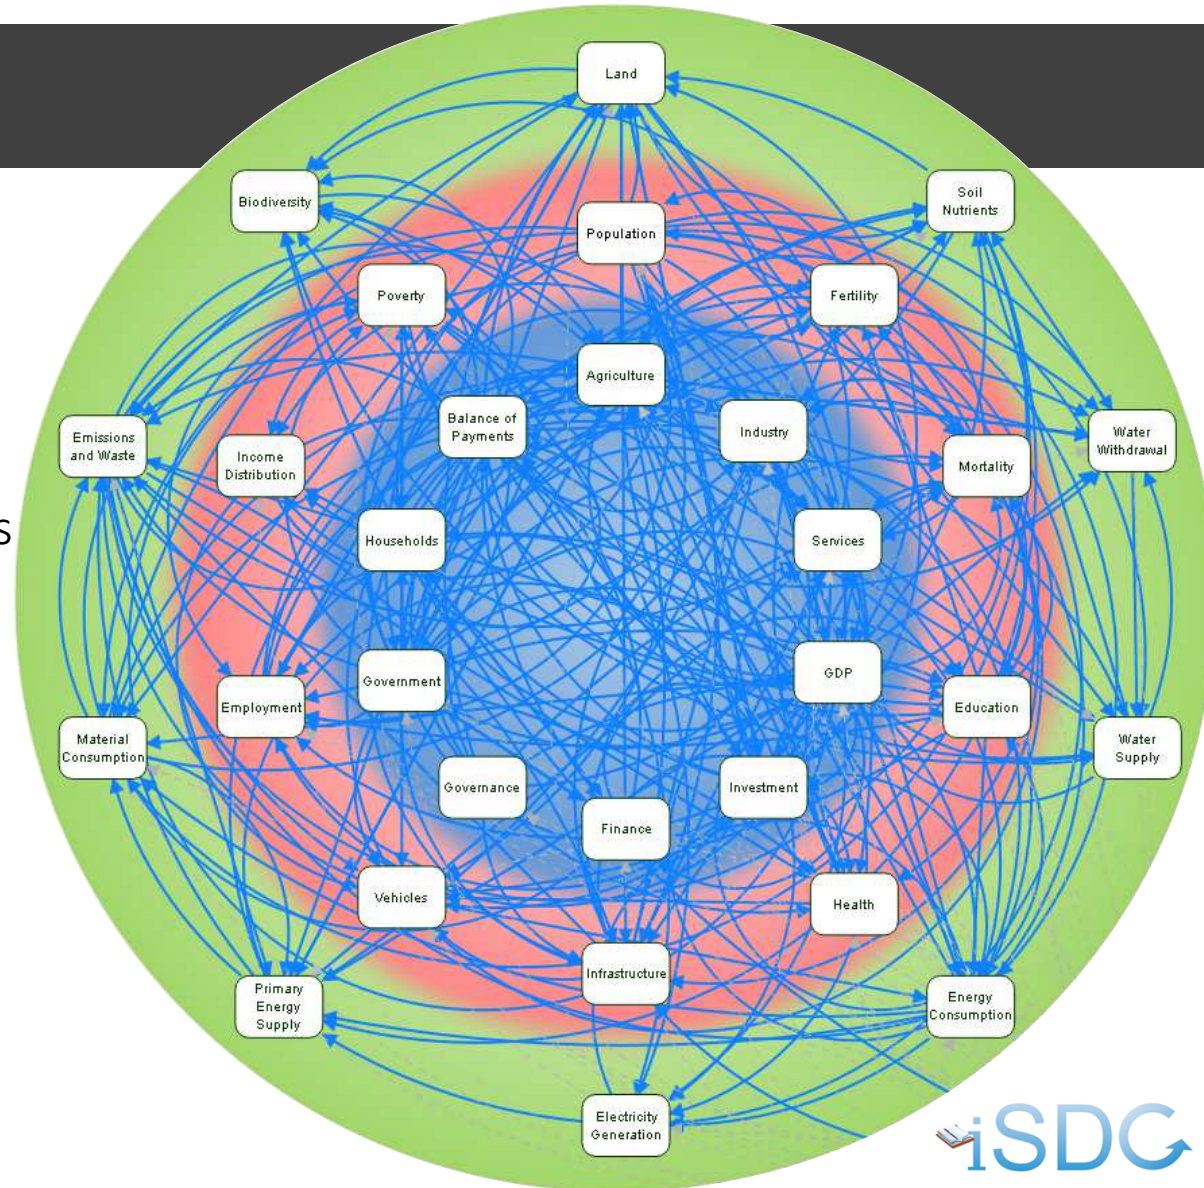

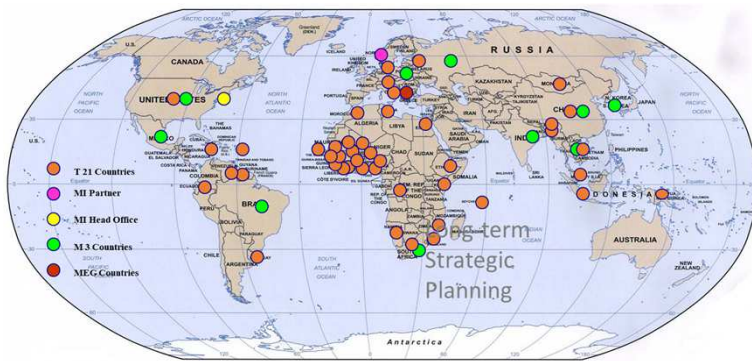

System Dynamics Modelling

- ✓ *iSDG* integrated simulation model – Millennium Institute
- ✓ System dynamics language – stock and flow structure
- ✓ 30 sectors
- ✓ 3000+ variables
- ✓ Flexible, modular & transparent structure – adaptable
- ✓ Calibrated on 25+ years of data
- ✓ Multi-parametrical optimisation
- ✓ Model validation and sensitivity analysis procedures

MI's Flagship Tool

- ✓ A 'policy flight simulator'
- ✓ Simulates the effects of different policies and investments on SDGs achievement by 2030
- ✓ Generally via policy scenario analysis
- ✓ 40+ country modelling applications globally

ANALYSIS

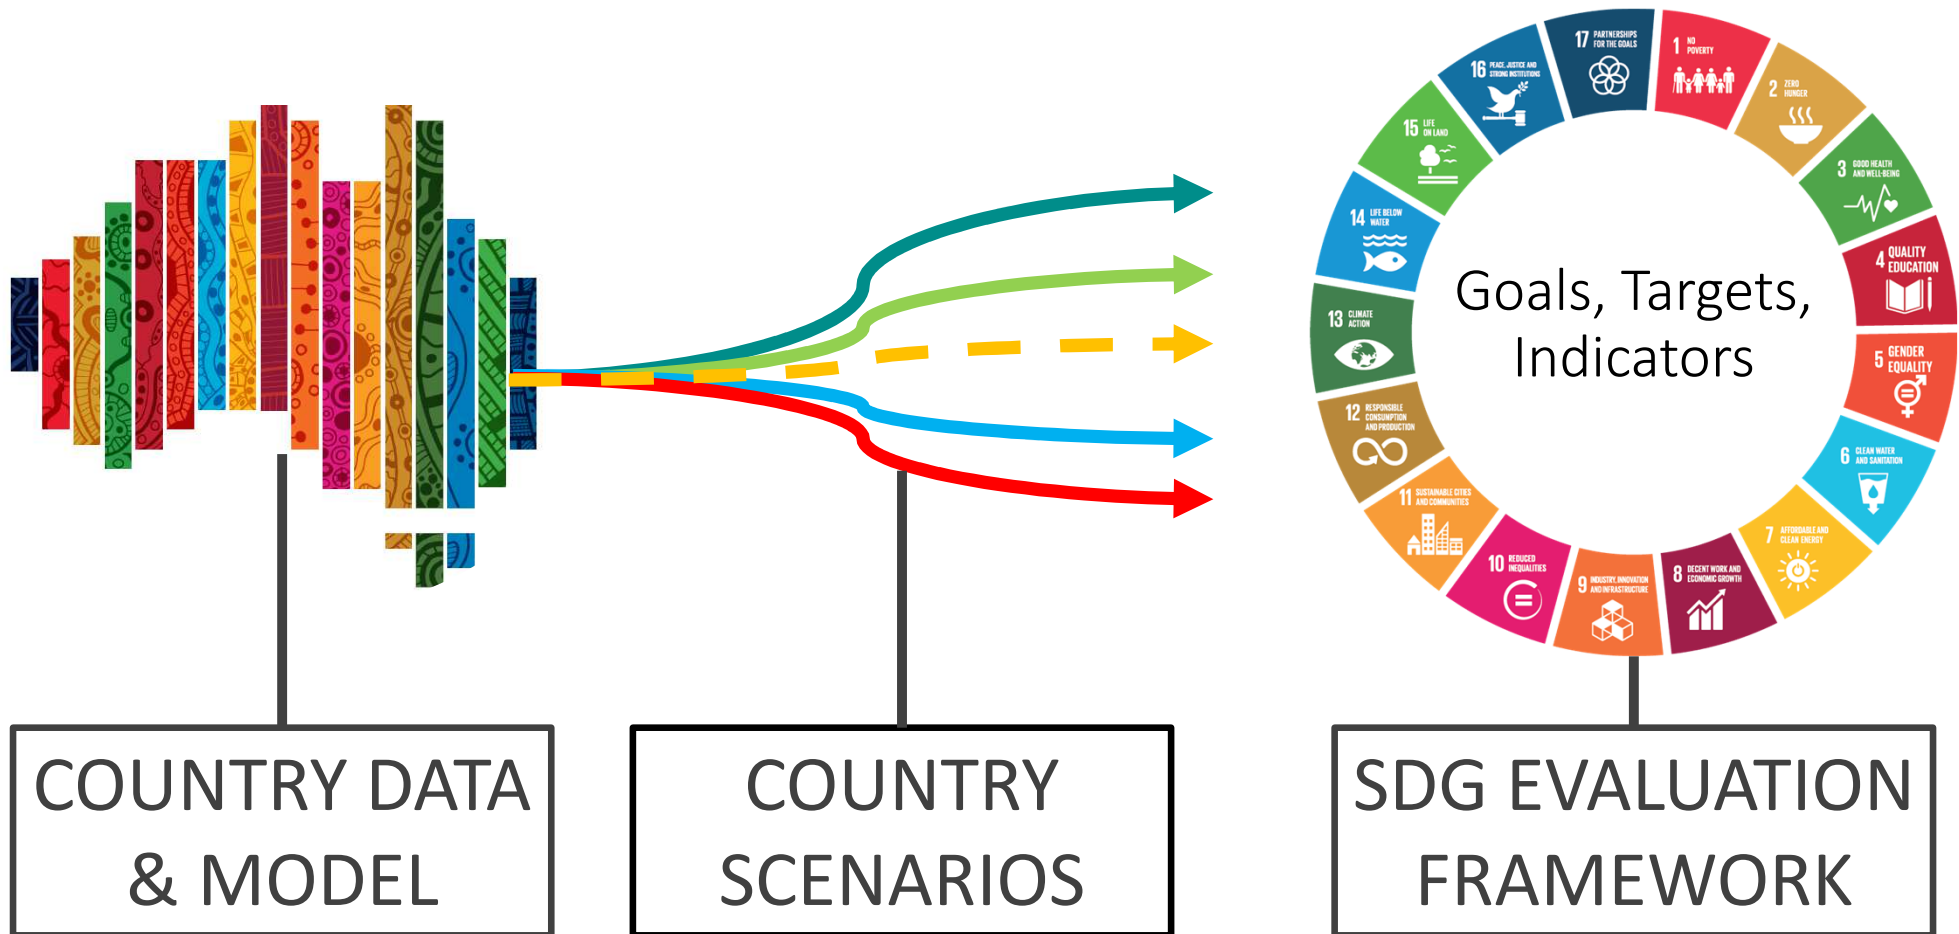

<https://doi.org/10.1038/s41893-019-0409-9>

Greater gains for Australia by tackling all SDGs but the last steps will be the most challenging

Cameron Allen ^{1*}, Graciela Metternicht¹, Thomas Wiedmann ^{2,3} and Matteo Pedercini⁴

<https://doi.org/10.1038/s41893-019-0409-9>

Modelling Stages...

1. THE MODEL

- ✓ *iSDG* integrated simulation model – Millennium Institute
- ✓ System dynamics language
- ✓ 30 sectors
- ✓ 3000+ variables
- ✓ Flexible, modular & transparent structure – adaptable
- ✓ Calibrated on 25+ years of data
- ✓ Multi-parametrical optimisation
- ✓ Model validation and sensitivity analysis procedures

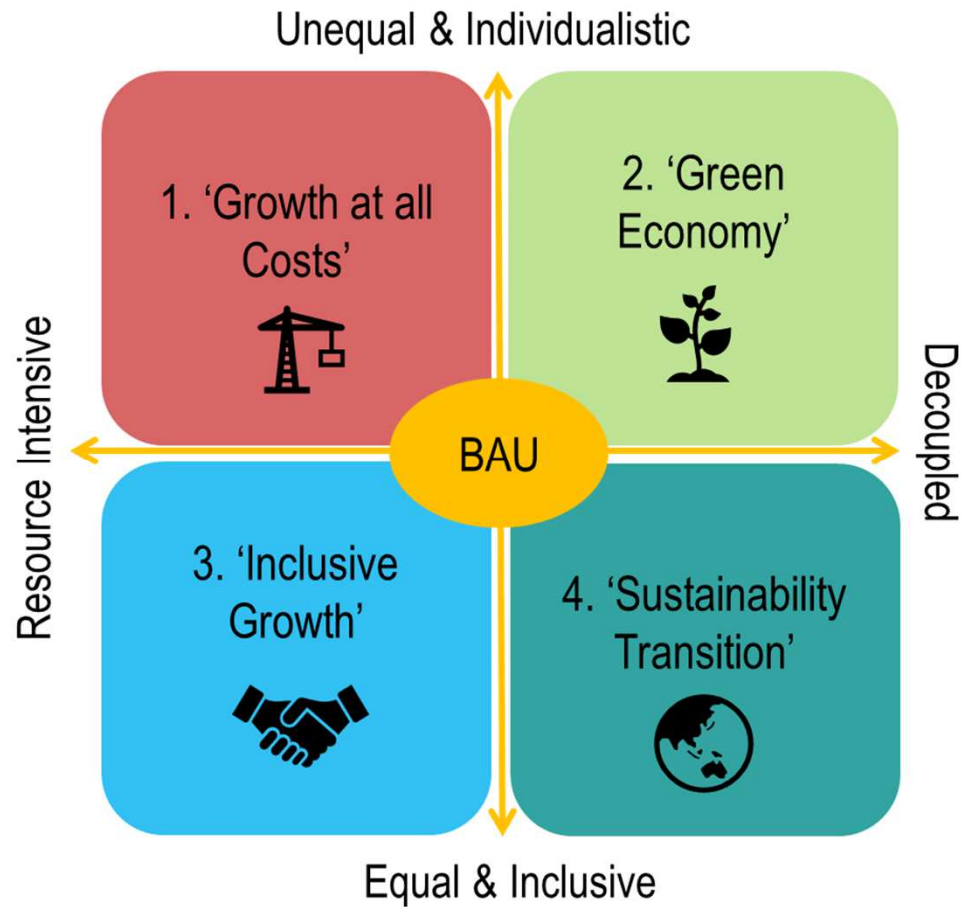

1. THE MODEL – Baseline (BAU)

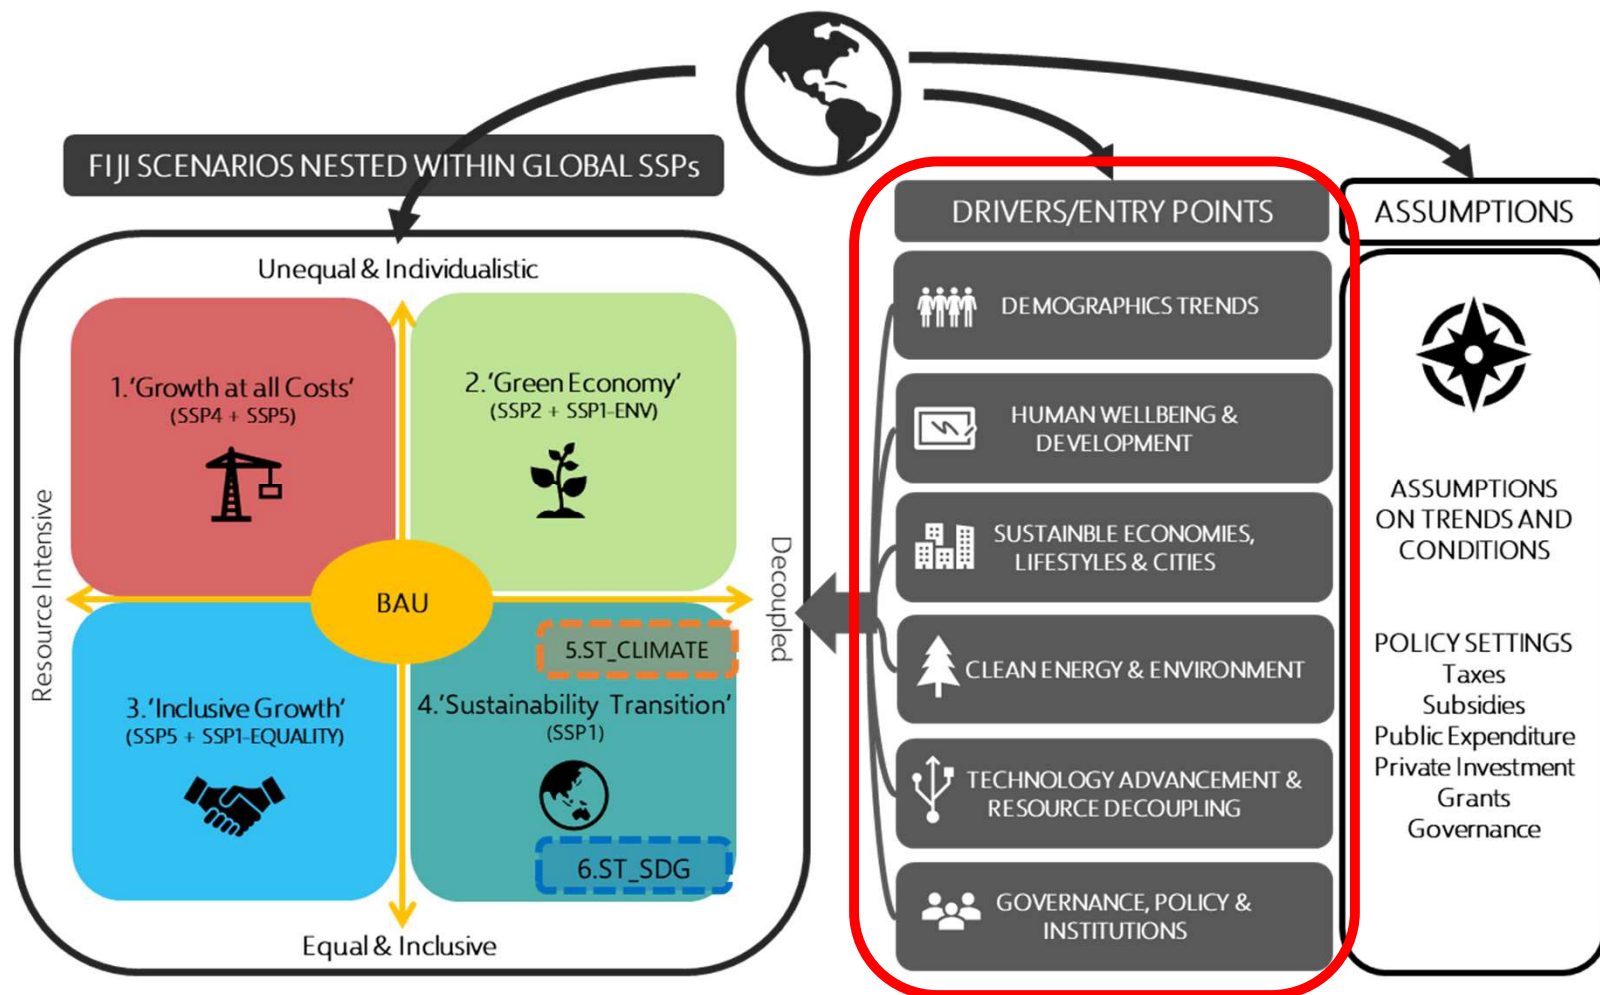

Variable	R ²
Total population	0.99
Real GDP	0.99
Total investment	0.94
Government Expenditure	0.99
Total final energy consumption	0.92
Total water withdrawal	0.86
GHG in CO2-e	0.82
Life expectancy	0.99

2. THE SCENARIOS

Scenario Entry Points – Sustainability Transformations

Entry Points & Interventions

Entry Points & Interventions

DRIVERS/ENTRY POINTS

DEMOGRAPHICS TRENDS

HUMAN WELLBEING &
DEVELOPMENT

SUSTAINABLE ECONOMIES,
LIFESTYLES & CITIES

CLEAN ENERGY & ENVIRONMENT

TECHNOLOGY ADVANCEMENT &
RESOURCE DECOUPLING

GOVERNANCE, POLICY &
INSTITUTIONS

Sustainable economies, lifestyles and cities

- Tax settings on consumption, income & profits and trade
- Investment in sustainable infrastructure, transport, buildings, industry
- Expenditure on climate change adaptation

Entry Points & Interventions

DRIVERS/ENTRY POINTS

DEMOGRAPHICS TRENDS

HUMAN WELLBEING &
DEVELOPMENT

SUSTAINABLE ECONOMIES,
LIFESTYLES & CITIES

CLEAN ENERGY & ENVIRONMENT

TECHNOLOGY ADVANCEMENT &
RESOURCE DECOUPLING

GOVERNANCE, POLICY &
INSTITUTIONS

Clean energy and environment / Resource Decoupling

- Investment in solar, wind, hydro, biomass energy
- Investment in energy efficiency (household, industry, vehicles)
- Electrification of buildings and transport (BE & EVs)
- Investment in reforestation, sustainable ag, marine and terrestrial protected areas
- Material and resource efficiency targets

Entry Points & Interventions

DRIVERS/ENTRY POINTS

DEMOGRAPHICS TRENDS

HUMAN WELLBEING &
DEVELOPMENT

SUSTAINBLE ECONOMIES,
LIFESTYLES & CITIES

CLEAN ENERGY & ENVIRONMENT

TECHNOLOGY ADVANCEMENT &
RESOURCE DECOUPLING

GOVERNANCE, POLICY &
INSTITUTIONS

Governance and Institutions:

- Government effectiveness
- Regulatory quality
- Control of corruption
- Political stability
- Voice and accountability

Project Scenarios to 2030 or beyond...

2016→ 2030

Alternate Scenarios – Economic Performance

‘Sustainability Transition’

‘Growth at all Costs’

Total GDP

GDP per capita

Alternate Scenarios – Social Performance

Poverty

Income Inequality

Alternate Scenarios – Environmental Performance

Renewable energy

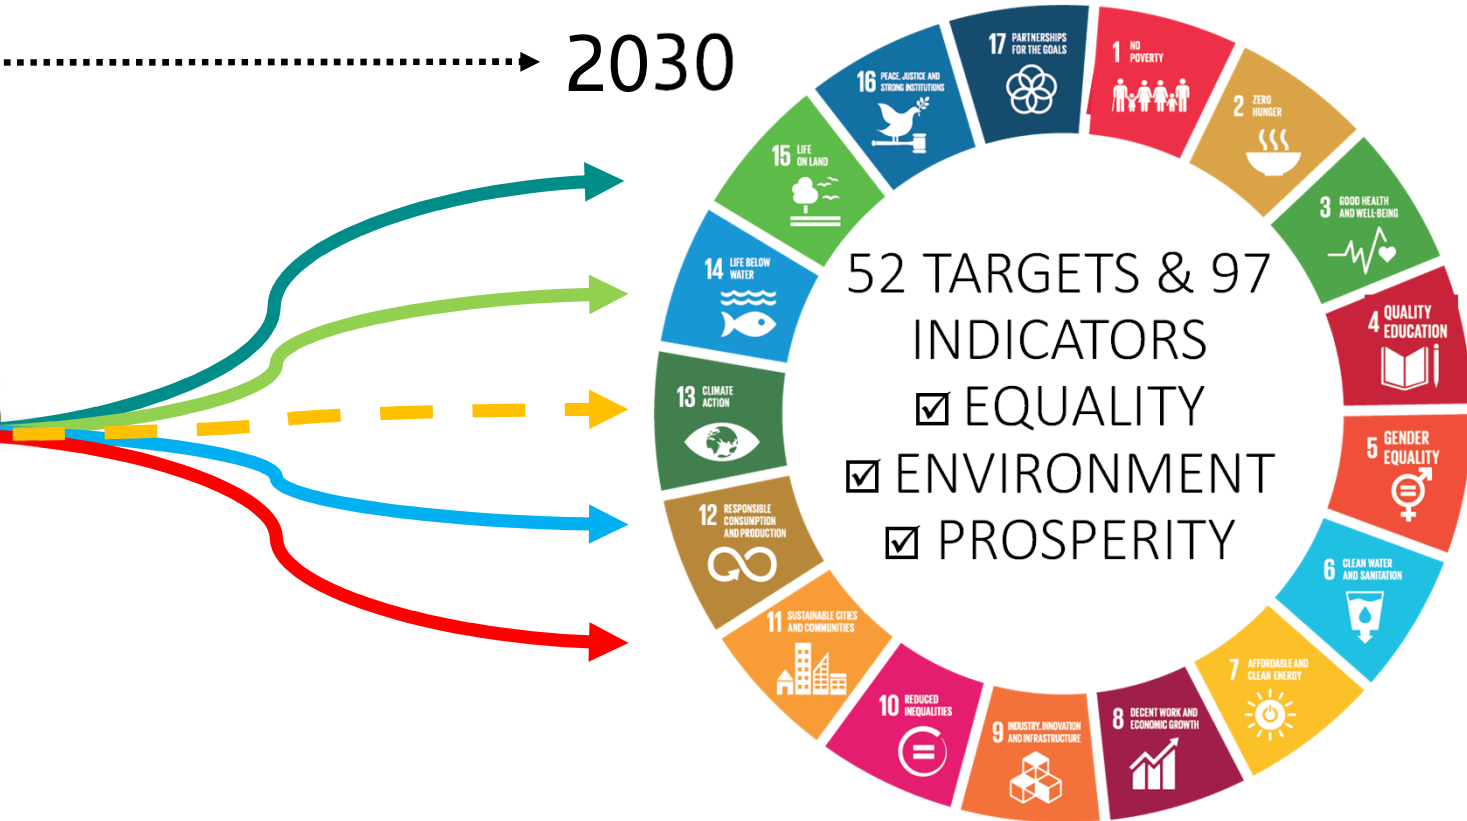

GHG Emissions

3. THE EVALUATION FRAMEWORK

2016→ 2030

- 1 Growth at All Costs
- 2 Green Economy
- 3 Inclusive Growth
- 4 Sustainability Transition

Sustainability Transition:

FAIRER: higher equality and lower poverty

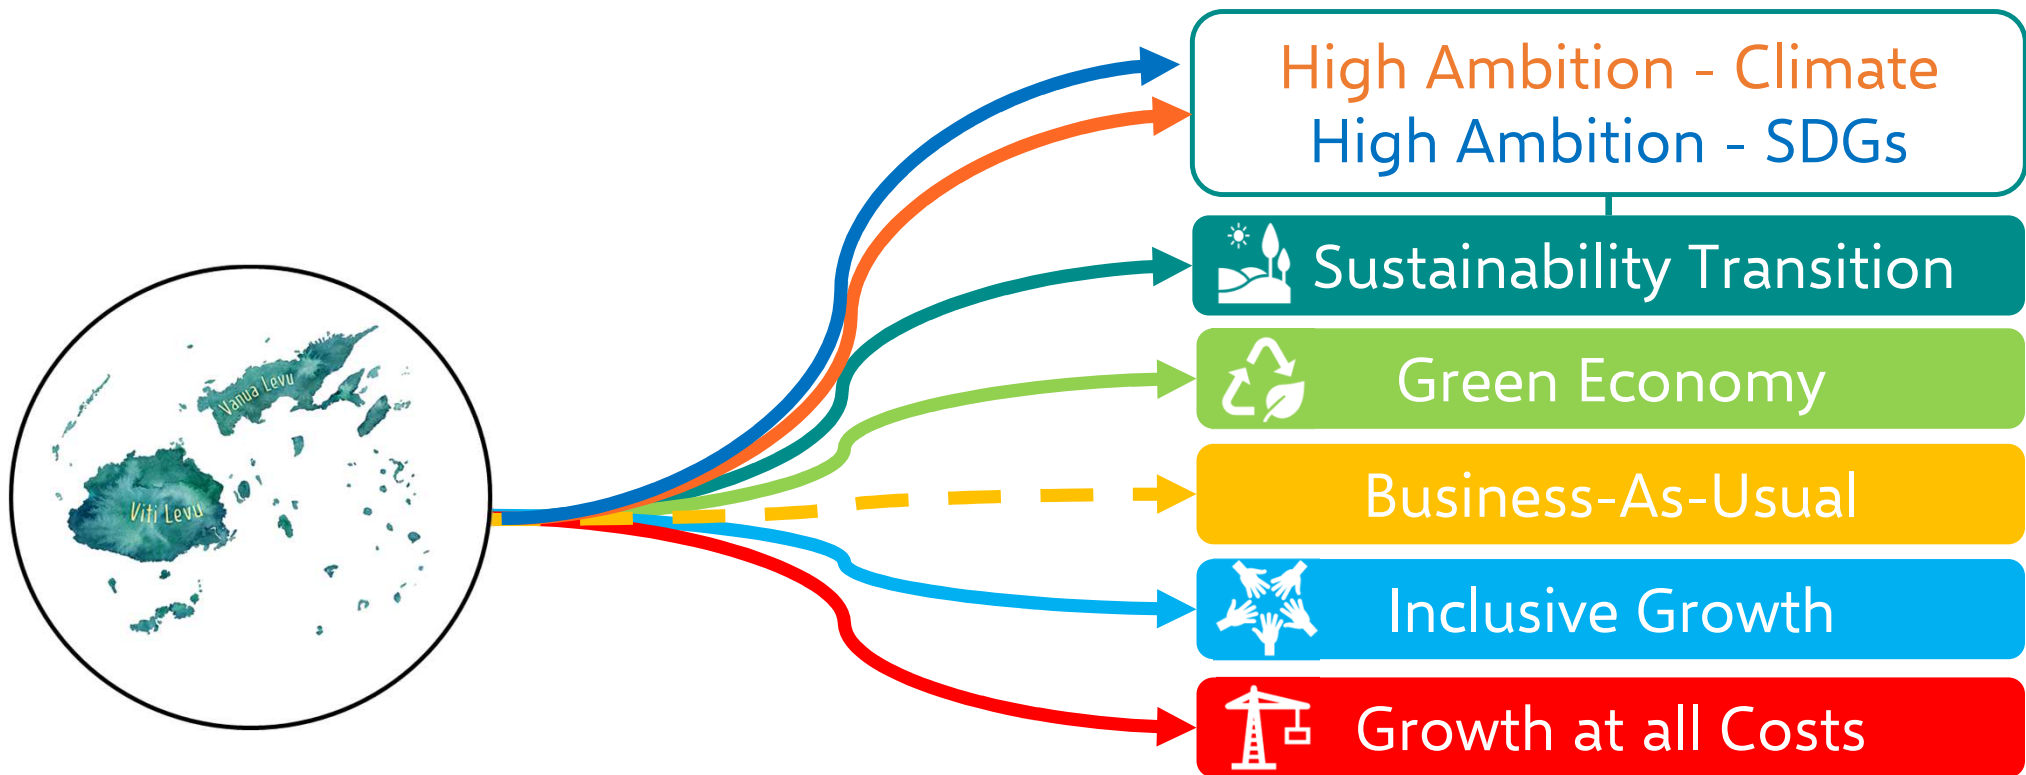

GREENER: reduced environmental footprint

PROSPEROUS: higher GDP per capita

What did we learn - Australia?

- On current trends, Australia will fall short of the SDGs in 2030 (40% progress)
- Rapid progress on SDGs is there for the taking – additional investment 4% GDP per annum across key entry points financed through additional revenue
- Government has a key role to play using policy levers and expenditure to drive investment and change behaviour
- Research before COVID – potential to guide medium-term recovery, investment – build back better

FIJI SCENARIOS

Overall progress on SDGs by 2030

High Ambition SDG 83%

Climate Action 76%

BAU 41%

Fiji – Investment requirements per % progress on SDGs
