

PAPUA NEW GUINEA STATEMENT

BY

DR. ERIC KWA, SPECIAL ENVOY OF THE PRIME MINISTER AND SECRETARY FOR DEPARTMENT OF JUSTICE AND ATTORNEY-GENERAL AND HEAD OF PAPUA NEW GUINEA DELEGATION

TO THE

PLENARY SESSION OF THE

SECOND UNITED NATIONS CONFERENCE TO SUPPORT THE IMPLEMENTATION OF SUSTAINABVLE DEVELOPMET GOAL 14: CONSERVE AND SUSTAINABLY USE THE OCEANS, SEAS AND MARINE RESOURCES FOR SUSTAINABLE DEVELOPMENT

29/30 JUNE 2022

LISBON, PORTUGAL

"Check against delivery"

Dstinguished Conference Co-Presidents, Excellencies, Ladies and Gentlemen;

I am honoured to deliver these remarks, on behalf of my Prime Minister, Hon. James Marape, who is in the midst of our National General Election and extends his regrets for being unable to join this important global dialogue but also conveys Papua New Guinea's confidence and trust that this Conference, under its well chosen theme, will deliver meaningful and practical outcomes that will help all of our countries and communities become better owners, leaders and drivers in successfully taking forward the strong foundations laid by SDG 14, in particular, and also the other inter-related SDGs, in support of our national development aspirations and wellbeing.

May I thank Portugal and Kenya for your tremendous efforts and leadership to co-host this Conference despite the serious global challenges of COVID-19 pandemic. The impressive turnout and the range of activities is indeed most pleasing.

Let me also align Papua New Guinea with those remarks made by the respective Chairs of the Group of 77 and China (Pakistan), the Pacific Islands Forum (Fiji) and the Alliance of Small Island States (Antigua and Barbuda) and also by the President of Palau on behalf of the Pacific Small Island Developing States (PSIDS).

Excellencies,

Our humanity and our future are intertwined with the health of our ocean. For Papua New Guinea, the ocean is central to our people's identity, culture and sustainable development. It plays a fundamental role in providing food and livelihood for our people; a mainstay for economic growth and jobs linked to fisheries and other marine resources; a carbon sink; and home to diverse marine resources found in our waters.

We are, however, seriously concerned with the declining health of our ocean and the impact of multiple stressors on it, which is projected to increase further as the world's population continues to grow.

Our island and coastal communities and peoples continue to be at the mercy of the rising sea-levels and their arable land and sources of fresh water are disappearing, the warming ocean is threatening our ecosystem and climate change impacts are worsening it and our porous maritime boundaries continue to be exploited wantonly by other parties and our marine resources plundered, including through Illegal, Unregulated and Unreported fishing. It is therefore high time for all of us to take seriously these growing concerns and act now and together to reverse and stop this deterioration. Our Conference theme is indeed apt and timely. We must harness this Conference to find sustainable long-term solutions that will address the root causes of the decline in the health of our ocean and to protect it better to save ourselves.

This should not only be based on best available science and innovation but to also better harness our traditonal and indigenous knowledge about the ocean. It must also involve access to affordable transfer of marine technology, adequate and sustained ocean acivities financng.

Focused, practical and sustained multistakeholder partnerships is also crucial and, at the heart of this, must not be the pariocial interests of a few but rather for the greater good of our shared global commons and common humanity.

Excellencies, on Papua New Guinea's part, we are strongly committed and taking significant actions in key areas to ensure protection of our ocean's health within our areas of national jurisdiction. The following are such actions.

National Ocean Policy

I am pleased to inform this Conference that Papua New Guinea established its first-ever National Ocean Policy in July 2020. It is an integrated framework that addresses ocean governance and management in the country.

This also accounts for Papua New Guinea's commitment to implement SDG14 and addresses adaptation and mitigation measures to the challenges facing the ocean.

To fully implement this policy, the appropriate institutional arrangements, regulatory reforms and infrastructure platforms are a work in progress. A key aspect is the establishment of a national Marine Scientific Research (MSR) monitoring and Database System. This will facilitate collection, analysis and exchange of MSR data in a transparent and inclusive way, which will also strengthen marine data credibility and integrity.

We also established in 2021 the country's Territorial Waters and Exclusive Economic Zone (EEZ) Marine Scientific Research Committee (MSRC). This provides a simplified procedure to access marine resources in our waters for academic and scientific purposes and also contribute to advancing marine science and technology.

We would welcome technical and other support under the auspices of the Decade of Ocean Science from our global and regional development partners in our efforts to set up and operationalize the national marine scientific research database system and related issues.

Fisheries

Excellencies, in the context of SDG 14.4 with respect to combating IUU fishing and 14.6 on fisheries subsidies, Papua New Guinea has been working with likeminded countries for a framework under the WTO arrangements to stamp out harmful fisheries subsidies and combat IUU fishing.

We are pleased to welcome the recent (17 June 2022) successful 12th WTO Ministerial Meeting outcomes that partially delivered on SDG 14.6 and look forward to its effective implementation. However, we urge for speedy conclusion to the outstanding work on addressing subsidies for overcapacity and overfishing and special and differential treatment for developing countries.

We have also launched in August 2021 our first-ever Fisheries Strategic Plan 2021-2030, a roadmap that intends to sustainably manage our fisheries resources for the country's economic development, including working with our neighbours and development partners to combat IUU fishing within our waters and foster sustainable artisanal and small-scale fisheries and aquaculture for our local communities benefit.

These are in addition to measures we are taking at the sub-regional level through the Parties to the Nauru Agreement and at the regional level though the Forum Fisheries Agency.

We therefore welcome bona fide development partners to work with us in this important sector bearing in mind the importance of sustainability and ocean-health.

Biodiversity

Another important progress Papua New Guinea has made is on the Protected Areas National Policy, which was recently adopted. A key aspect of it relates to SDG 14.5 on conservation of at least 10 percent of coastal and marine areas.

With the welcome and valued support of development partners such as UNDP, JICA and Wildlife Conservation for Nature, we are working towards the declaration, this year, of Marine Protected Areas (MPAs) in the country, covering a total area of over 17,000¹ square kilometers. Once concluded, this will be included in the UN Oceans Voluntary Commitments register.

-3-

¹Bootless Bay, Central Province, approximately 13,867.6 hectares (138.67 km²), Lovongai Local Level Government with approximately 5,814 km² of marine and coastal waters and Murat LLG MPA covering approximately 11,071 km² of marine and coastal waters in New Ireland Province.

Additionally, for marine biodiversity conservation and protection from international shipping activities, Papua New Guinea has been granted its first ever Particularly Sensitive Sea Area (PSSA) designation in the country's north east region² by the International Maritime Organization (IMO). Further risk assessments are conducted for the extension of PSSA with the introduction of other Associated Protective Measures as it accommodates the important international shipping route that links the South Pacific region with Asia.

Our efforts to protect our rich biodiversity has also resulted in sixty-one (61) existing terrestrial protected areas.

Our major challenge in ensuring the effective and sustained implementation of these marine and terrestrial biodiversity is adequate, sustained and predictable financing and technical assistance. We call on the international community to assist and support us in this important area that will be a pivot for a healthy ocean.

Ocean-Climate Nexus

For the health of the ocean, we must also account better for the ocean-climate nexus, as recognized by the COP26 Glasgow Pact that established an annual oceans-climate change diaglogue.

Healthy ocean ecosystem can be a lever for offshore marine renewble energy, blue carbon, adaptation of vulnearble coastal communities and decarbonisation of ocean-based sectors such as shipping.

Co-Presidents and Excellencies,

Marine Pollution

Addressing marine pollution is another key area deserving focused attention from all of us. In my country, we have the necessary national legislations³ in place that addresses marine pollution from ships and installations. In the interest of time I will not spell these out except to note that these are in our full statement.

We have also under our Environment Act 2000 banned single use plastic shopping bags since June 202,0 paving the way for its total ban in the country.

-4-

² Jomard Passage, Milne Bay Province. A natural sea lane of a width of 5 kilometers.

³ Ships & Installations Act 2013 & its Regulation, Sea Dumping Act 2013 & its Regulation, Liability & Cost Recovery Act 2013 & its Regulation, Ballast Water Control Act 2013 & its Regulation and Preparedness & Response Act 2013.

In this spirit, we welcome the March 2022 UNEA 5.2 agreement, including for a negotiated international legally binding instrument by 2024 to end plastic pollution, which remains a serious threat to marine ecosystems.

Another serious concern Papua New Guinea has relates to the discharge of nuclear waste into the ocean, including in the Pacific region. This is harmful to marine ecosystems and human health. All efforts must be made to prevent this under existing relevant multilateral frameworks. Those responsible for such discharges must be held accountable.

Marine Biodiversity of Areas Beyond National Jurisdiction (ABNJ)

The tragedy of the commons, particularly in the high seas, cannot and must not be allowed to continue unabated. We are therefore strongly supportive of the conclusion in August this year the BBNJ instrument being negotiated multilaterally to conserve and sustainably use marine biodiversity of areas beyond national jurisdiction.

As Small Island Developing States, we need capacity building and transfer of marine technology for us to contribute meaningfully to the implementation of this new treaty once adopted, in support of a healthy, productive and resilient ocean.

Excellencies and dear friends of the ocean,

In closing, Papua New Guinea recognizes the pivotal role that multistakeholder partnerships from governments, the private sector, civil society organizations to individuals, can play in galvanizing the needed support for the effective implementation of SDG 14 at all levels.

This rings true especially for developing countries, particularly SIDS, such as my own country, which continues to face multiple challenges, including resources and capacity constraints, gaps in marine science and knowledge and marine technology shortcomings, compounded further by the impacts of COVID-19 and climate change.

Let us not allow this opportunity to be yet another talkfest with an Ocean Political Declaration merely on paper but rather one we can all be proud of, where genuine, practical and transformative actions and solutions can be delivered in a timely, predictable and sustained manner for the ocean we want, now and for the generations to come. At the heart of this, must not be the pariocial interests of a few but rather for the greater good of our shared global commons and common humanity. Going forward, as a maritime and archipelagic nation, my country's commitment to doing our part for a healthy ocean remains steadfast. I thank you all for your attention.
