

UN 2023 Water Conference Preparatory Meeting

October 25, 2022

**Statement of Anthony Rock
Senior Advisor
International Science Council (ISC)
(formerly the International Council of Scientific Unions - ICSU)**

Thank you, Mr. President.

I speak today on behalf of the International Science Council, an organization comprised of national science bodies in 142 countries and diverse international entities across the natural and social sciences.

Far too many people in the world today still struggle with limited access to safe water and sanitation, threatening critical aspects of daily life, including essential health care and food production. Certainly, the health challenges of our recent global pandemic bring into sharp focus the fundamental intersection between sustainable development goals addressing health, wellbeing, water, and sanitation in homes and health care facilities worldwide, for example.

If we hope to implement measures to ensure adequate, sustainable water resources for all, then we must first establish the trust and the engagement of communities everywhere in this effort, with all interests carefully considered. We will build that trust when we partner with qualified and respected scientists to understand the problems, spark innovation, and formulate sound, evidence-based policies and practices.

As with water itself, science is also a vital resource in the public interest. In the UN Secretary General's own words: "We must strengthen the interface between science and policy...in our high-level policy decisions."

The International Science Council, representing leading scientific organizations worldwide, has a rich history of community engagement, as well as policy guidance to UN leadership in support of the UN Sustainable Development Goals.

Science underscores every theme of Water 2023. Let us therefore strive to make real science the platform upon which real policies and practices are crafted. The ISC looks forward to further promoting transparent information exchange and advice to the United Nations (and its member states) to implement these sound policies and practices that will ensure sustainable water availability for all.

Thank you.
