

Creating access to through technology enabled smart management

Access to a clean toilet is a basic human right. Yet, women throughout the world doesn't have access to clean toilet .This is one of the most common forms of gender discrimination, with various health consequences. The lack of access to clean toilets in public spaces not only leads to health problems for women but also hampers freedom to their full participation in work and public life. Gender equity will not be achieved if we can not ensure access to proper toilets.

Water action agenda will be to ensure access to toilet for all through technology enabled smart management. Technologies can be used to monitor the performance of sanitation services. Digitized systems can help to decision making process, sustainability of the service and business and inform policy to achieve sustainable WASH services.
