Water Conference 2023.

Drinking Water A Humanitarian Fight / UN SDG 6.

Water should be clean and portal for usage and survival of living organism.

Water for drinking purposes must be clean, hygienic, portal and readily available at all times, when needed. Sustainable water usage is essential in all water activities on this planet earth. Irrigation for farming purposes helps for crop productivity. Water for Hydroelectric power generation help in the production of energy for industrial and human usage. Nations depend on this vital source of energy for survival. Water is therefore key for every human activity on earth.

Farming activities in rural village farmlands which involve the use of agro chemicals, such as insecticides ended up polluting most water bodies. These chemicals, after heavy rainfall washes down to the streams, lakes, rivers and other water bodies, hence polluting the entire water bodies in such village rural communities. The polluted water affects aquatic life. This then is passed on to humans for consumption.

Action is needed to be taken to protect, preserve water from pollution, and contamination. The climate and the environment have to be protected for human and other living organism survival.

In order to achieve the United Nations SD goal 6, ie, ensure access to water and sanitation for all. Access to safe water, sanitation and hygiene must be the most basic human need for health and well-being. Stakeholders, Government, Leaders, Rural village farming communities, manufacturing companies and environmentalist etc. must all get involve to help achieve UN SDG 6. And the world will have good sufficient water for all purposes
