Thank you. My name is Fiona Brown, a Technology Focal Point with the Science-Policy Interface of MGCY. Technology holds the key for the creation and implementation of resilient solutions to advance the Sustainable Development Goals, including the climate crisis, and global conflict. According to the Conflict and Environmental Observatory, international military actions are responsible for 5.5% of greenhouse gas emissions. In order to achieve effective, long-lasting mitigation, environmental conservation, and adaptation to climate impacts, there must be a permanent resolution of the more than 110 armed conflicts monitored by the Geneva Academy. In addition, climate change endangers economically and socially important natural resources such as transboundary aquifers, leading to conflicts over resource ownership. Technology has great potential to minimize conflict through early warning systems, innovations for nature-based solutions and climate data analysis to inform peace and climate policy. Digital data systems have the ability to predict climate fluctuations based on past trends, informing balanced, long lasting solutions. Proactive science-informed policy is needed to prevent and resolve climate related tensions in order to achieve lasting peace. Unfortunately, mis- and dis-information corrodes trust in technology and scientific innovation, villanizing emerging technology such as AI. A clear legal framework must be established guiding the appropriate, responsible uses of emerging technologies, consistent with General Assembly Resolution 78/265 for a safe, secure and trustworthy AI for sustainable development. General comment No. 25 states youth have the right to a safe digital environment where their privacy and views are fully respected. It is crucial that youth, women and marginalized groups, are fully represented as stakeholders most affected by climate change and global conflict with unique insight to contribute positively to resilient solutions for all the Global Goals, particularly climate action and the pursuit of peace. Thank you.
