Ocean Protection Bill-2022

Today's need for Ocean Protection...

Earth's life is entirely based on the environment and ocean, in the entire universe; Earth is the only life-giving planet that has the full support of nature. Life on earth is not possible without ocean and the environment, so we must all resolve to protect the ocean together and it is necessary and extremely important to live a happy and healthy life.

If we think about it today, we have done a lot of damage to the environment and ocean. Many sea and ocean areas, forests have been degraded by human beings for their own selfishness and greed for material comforts. There are many natural resources on this earth that human beings have damaged these ocean resources for their own selfish ends. Many places highlands, sea side areas are covered by cement buildings and uses of plastic and e-waste products. Many trees have been cut down and so many natural disasters have befallen humans. Human beings are responsible for all this.

Everyone should be satisfied with what nature has given. Today is the age of technology but no one is trying to protect the environment and ocean with this technology. In my opinion everyone should strive protect their surroundings from being polluted, plant trees for oxygen in the surrounding environment and ocean pollution. Water should be used properly. Rain water should be stored in rivers, lakes and canals. The soil should be protected from being infertile and polluted. So Friends, there's no need to tell us how important this earth and we also know that how we humans completely depend upon the earth's environment which led to the destruction of nature and ocean. Before it's too late we should protect our environment, ocean and preserve it for future generations.

A statement for the United Nation:

- 1) First of all, the Governments should set up a national level committee for environmental protection and appoint national level organizations / associations / individual representatives working on environmental and ocean issues in this committee.
- 2) The Government should not allow new constructions in all the scenic places, hilly areas, rivers, seaside areas, lakes in the present condition of the whole of world. All these scenic areas should be called green zones.
- 3) In every scenic places in the every country should be referred to as green zones. Even in this area, new constructions should not be allowed or constructions should be allowed considering the rules of environmental and ocean protection.
- 4) Efforts need to be made to plant trees in every places of the country and to create

5) Most of the traditional festivals and festivities in all over the world are in harmony with nature. Today's generation needs to understand its importance.

6) **"Let's go to Nature 2022"** The mission can create awareness about environmental and ocean protection by connecting every citizen.

7) The mission of one house, one tree will connect every district and city with nature.

8) Research should be carried out for recycling of plastic waste and e-waste by various projects and ideas.

9) The concept of save water and save trees should be implemented in different ways at the district level. Lectures and competitions should be held on the importance of water and how it can be reused.

10) To prepare and follow the state level regulations for the protection and safety of rivers, lakes and sea side areas in each country.

Everyone must follow all the rules as above. The United Nation **Ocean Protection Bill-2022** is important for environmental and ocean protection by introducing this bill.

Thanks & Regards
