

STI for preserving and sustainably using terrestrial ecosystems (SDG 15)

Nov. 29, 2017 Wooyeong Joo **National Institute of Ecology**

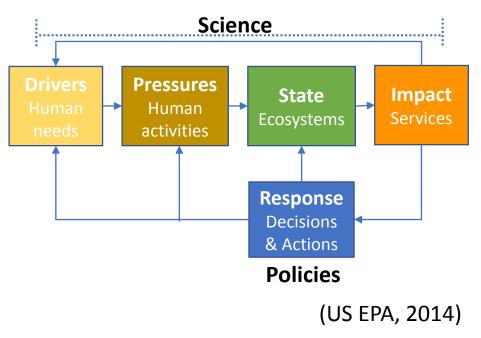

SUSTAINABLE DEVELOPMENT GOAL 15

 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

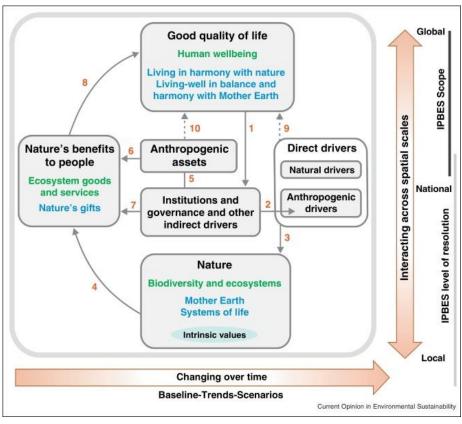

Targets	Indicators	
15.1: By 2020, ensure the conservation, restoration and sustainable use of terrestrial and inland freshwater ecosystems	15.1.1: Forest area as % of total land area15.1.2: % of protected areas for terrestrial and freshwater biodiversity	
15.5: Take significant action to reduce the degradation of habitats, halt the loss of biodiversity and, by 2020, protect and prevent the extinction of threatened species	15.5.1: Red List Index	
15.9 By 2020, integrate ecosystem and biodiversity values into national and local planning, development processes, poverty reduction strategies and accounts	Progress towards national targets established in accordance with Aichi Biodiversity Target 2 of the Strategic Plan for Biodiversity 2011-2020	

WHY TO USE INDICATOR FRAMEWORK?

DPSIR indicator Model

IPBES Conceptual Framework

(Diaz et al., 2015)

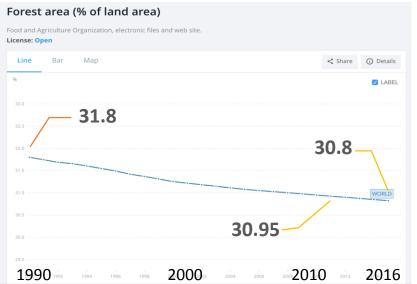

Socio-economic systems

SDG 15.1.1 FOREST AREAS

Consider Fig. 1 LIND COURT IT Commind Commind

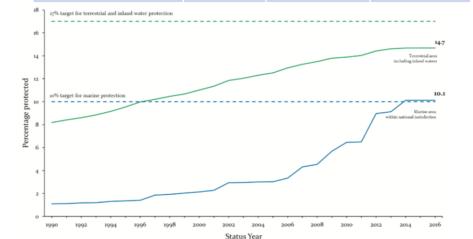

SDG 15.1.2 PROTECTED AREAS

INCH WCMC							
Туре	Protected area Coverage(%)		Changes in PAs				
	2010	2016					
Terrestrial Pas	12.7 %	14.8%	2.7M km2				
Marine Pas	4.0 %	12.7%					

Terrestrial protected areas Marine and coastal protected areas

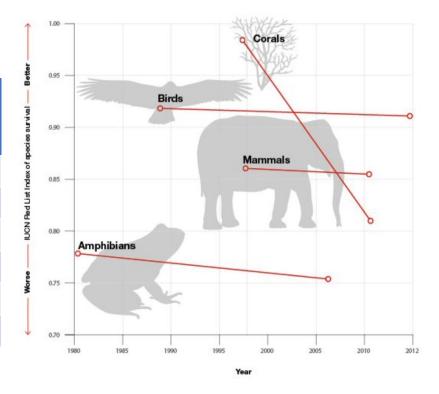

CHANGE IN GLOBAL FOREST AREA (FROM 2001 ~ 2016)

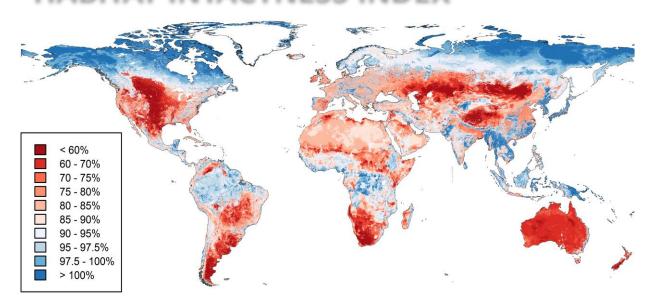

SDG 15.5.1: RED LIST INDEX

Vertebrates	# of threatened species			% of
	1996	2010	2017	threatene d species
Mammals	1,096	1,131	1,196	25%
Birds	1,107	1,240	1,460	13%
Reptiles	253	594	1,185	-
Amphibians	124	1,898	2,100	42%
Fishes	734	1,851	2,371	-
Total	3,314	6,714	8,312	-

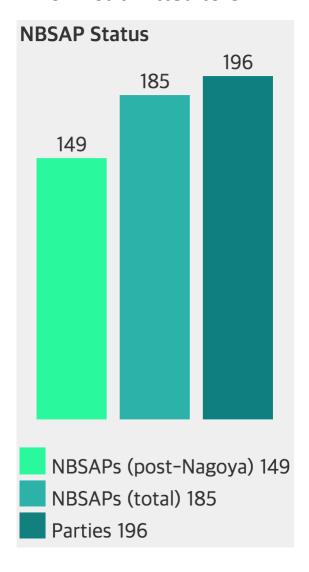

HABITAT INTACTNESS INDEX

(IUCN Red List, 2017)

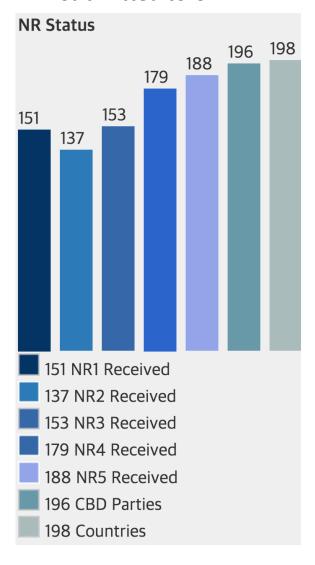

15.9.1: PROGRESS TOWARDS NBSAP ESTABLISHED (AICHI TARGET 2)

NBSAP submitted to CBD

NR submitted to CBD

Three recommendations

- Developing intuitive and informative indicators to better communicate with policy decision makers and multilateral stakeholders
- Developing and advancing Scenarios & modeling methodology to provide information of future changes in ecosystems for policy support
- Reducing knowledge gaps and information bias between countries and regions

Ecological Footprint

1.7 Earths

Needed to support human's demand Thailand 131 A

on Earth's ecosystems

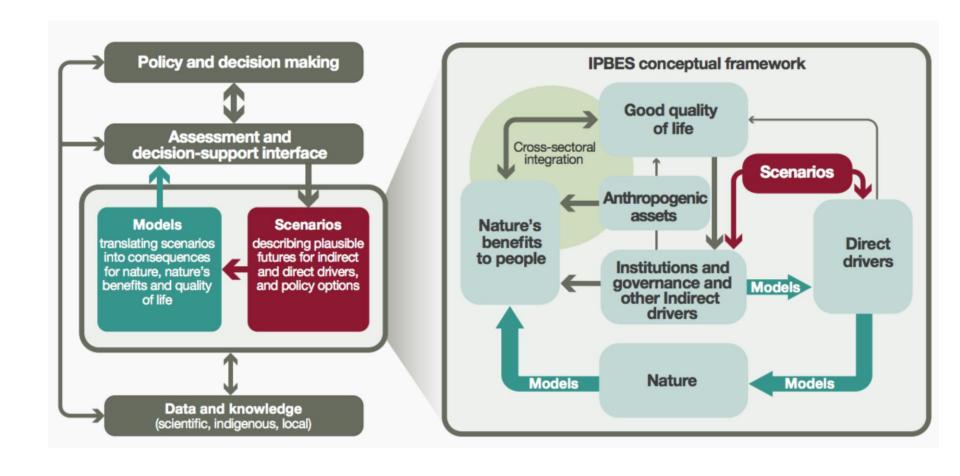

Global Footprint Network, 2017

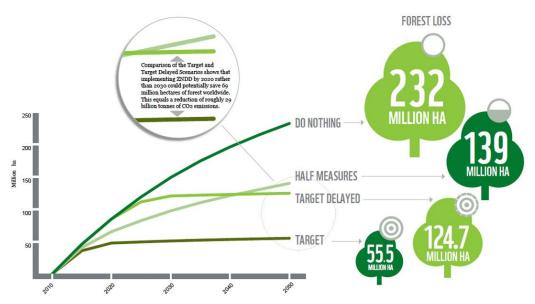

To support policy and decision making

by providing prediction of future changes in biodiversity and ecosystems

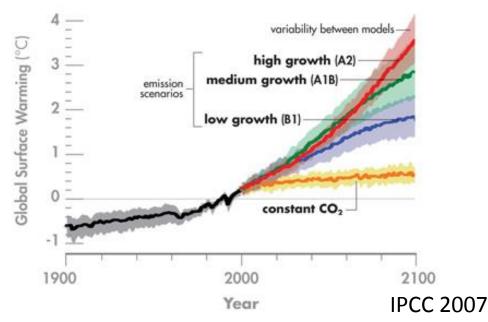

Scenario &
Modeling to
predict the
changes in
biodiversity and
ecosystem
services

This figure shows cumulative deforestation between 2010 and 2050. Under the Do Nothing Scenario, the area deforested is greater than the current total forest area of the Democratic Republic of Congo, Peru and Papua New Guinea combined.
