

Resume of the comments from Cuba in the session on SIDs Day afternoon
From 10th May.

Grateful for the presentations.

For Cuba is important all the analyzed issues.
Few elements of the Green economy are directly positive for sustainable development for example
Energy efficiency and savings, and rationality in its use, recycling, Re using, and others.
The Green Economy (GE) concept did not demonstrate how will combat and eradicate the poverty. GE should include in its systematic, the analyze of the economic model and the main causes of poverty, it is, the inequitable distribution patterns in SIDs

Green Economy should be based on the principles agreed at the World Summit on Sustainable Development in Rio, Agenda 21 and the Johannesburg Programme (incorporating the three dimensional approach of sustainable development).
Dr Raul Garrido.
